Jira Lab 2

Agile Backlog Creation & Sprint Simulation

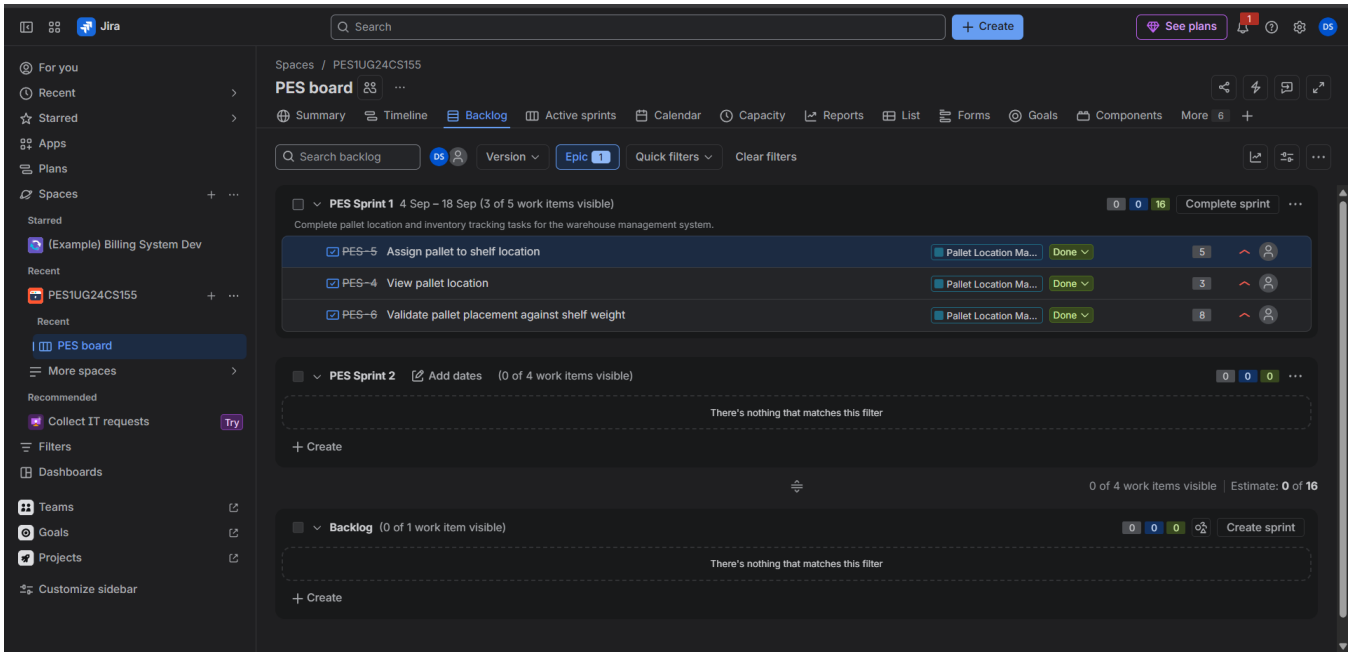

Name: Dhruv Swatantramath

SRN: PES1UG24CS155

Required Jira Screenshots

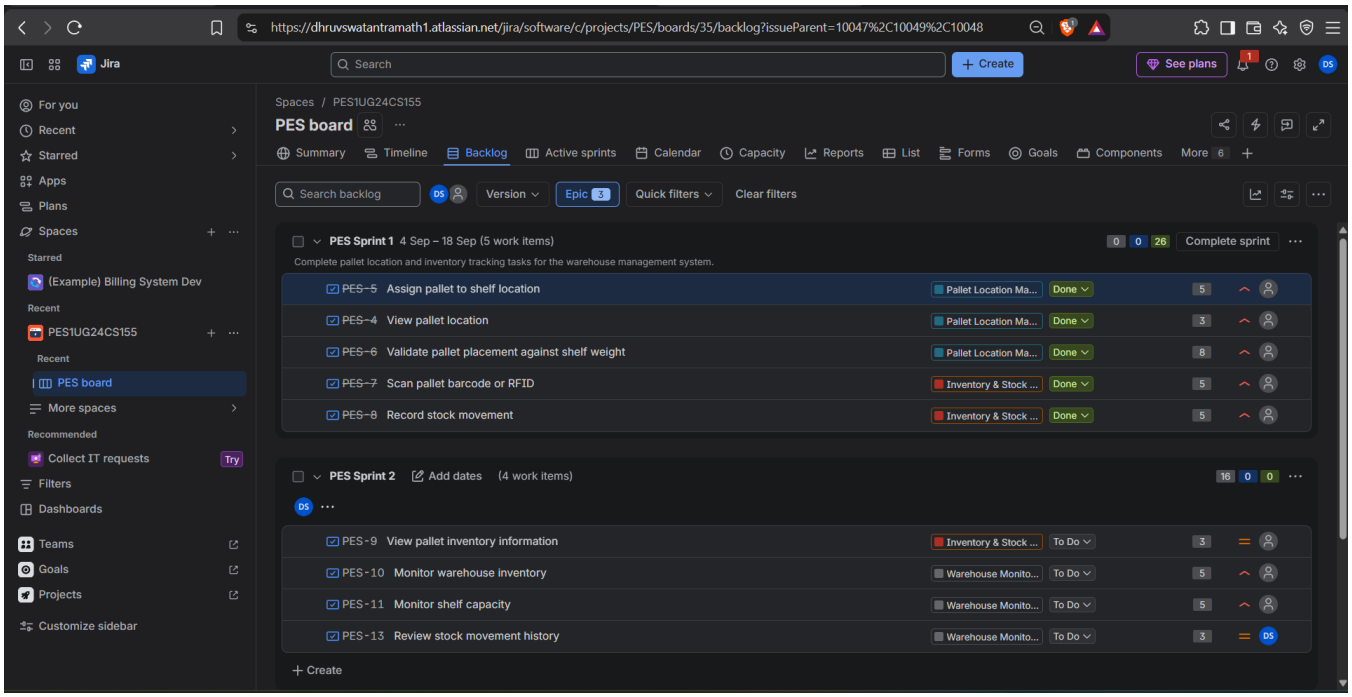

SS1 – Epic and User Stories

Pallet Location Management Epic with its associated User Stories and Story Points.

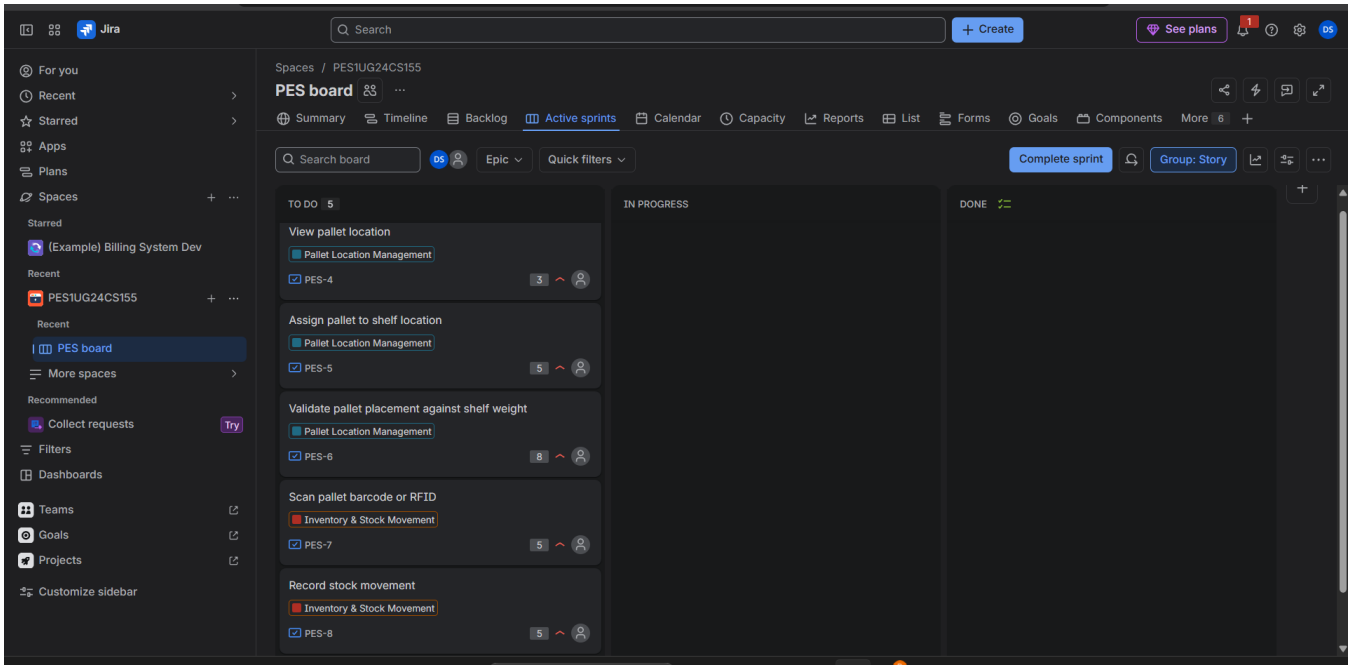

SS2 – Backlog and Story Point Assignments

Backlog showing Sprint 1 and Sprint 2 with Story Point values.

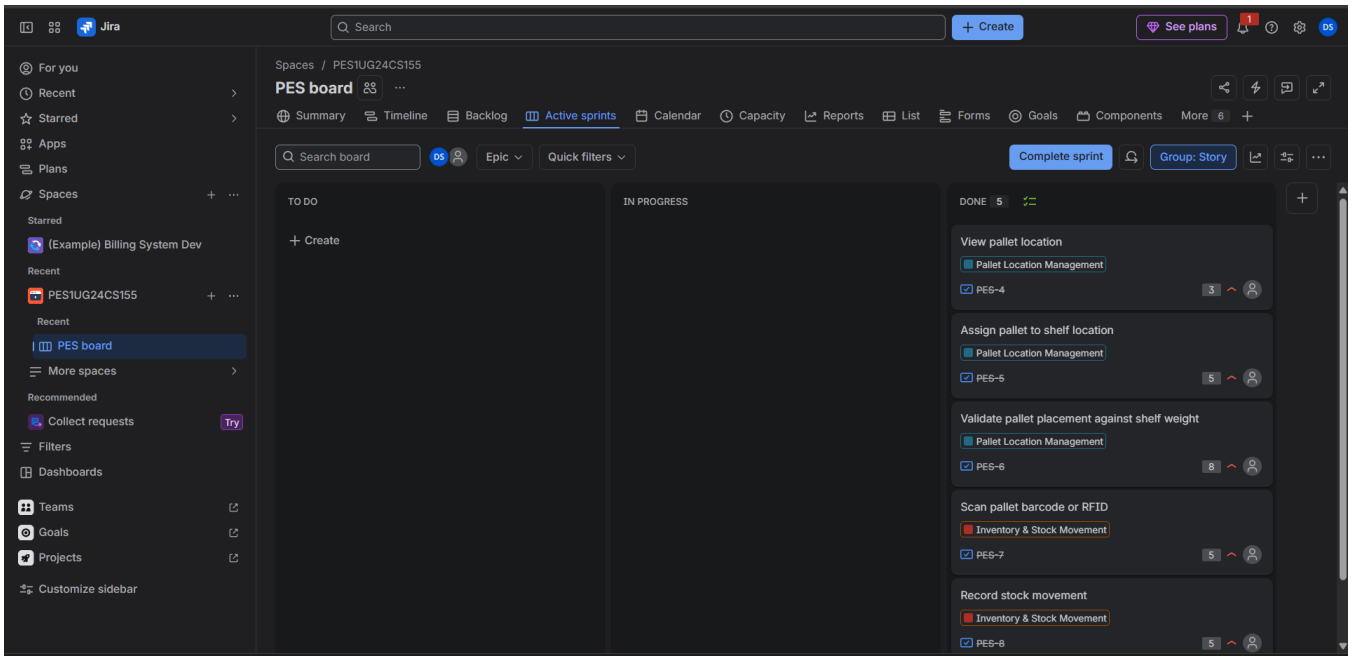

SS3 – Active Sprint (To Do)

Active Sprint board showing the five Sprint 1 stories in To Do.

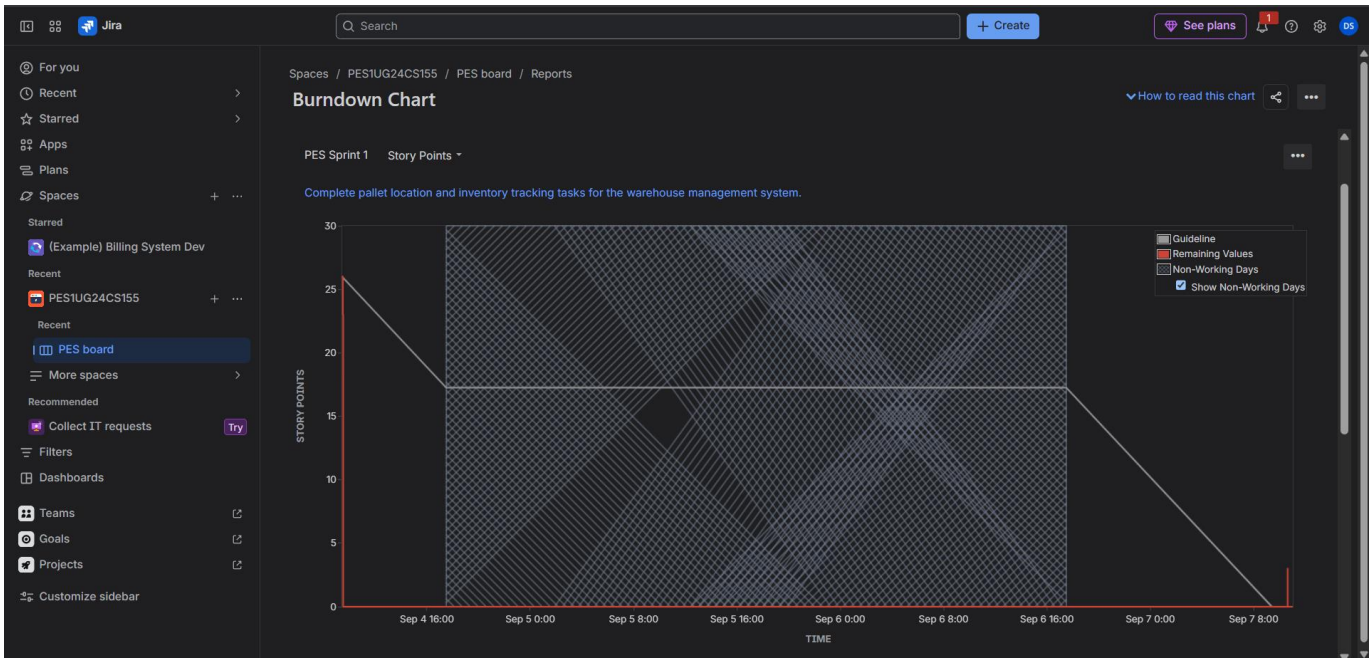

SS4 – Active Sprint (Done)

Active Sprint board showing the five Sprint 1 stories completed in Done.

SS5 – Burndown Chart

PES Sprint 1 Burndown Chart showing the remaining Story Points over the sprint period.

Reflection & Analysis

Jira Lab 2 – Agile Backlog Creation & Sprint Simulation

1. Did your estimations reflect the actual effort?

Yes, the story-point estimates provided a reasonable representation of the relative effort for the simulated sprint. The five Sprint 1 stories were estimated at 3, 5, 8, 5, and 5 points, for a total of 26 story points, and all five stories were completed. Since this was a simulation, there was no real development effort or elapsed implementation time to compare against, so the estimates should be treated as relative rather than as measurements of actual hours.

2. Was your backlog well-prioritized?

Yes. The backlog was organized around the warehouse-management requirements, with pallet location and inventory/stock-movement functionality represented in the backlog. The stories were assigned priorities and story points, and the higher-priority Sprint 1 work was selected first. This made the backlog structured and suitable for sprint planning.

3. How did your simulated sprint align with your plan?

The simulated Sprint 1 aligned well with the plan. Five user stories were selected for Sprint 1, placed on the Active Sprint board, moved through the workflow, and ultimately completed in the Done column. The completed Sprint 1 therefore delivered all 26 planned story points in the simulation.

4. What insights did the burndown chart give about your team's capacity?

The burndown chart showed the remaining work decreasing from the initial 26 story points to 12 and then to 0 as the sprint progressed. This indicates that the planned Sprint 1 workload was completed within the simulated sprint. In this exercise, the team demonstrated a capacity of about 26 story points for the selected sprint. However, because this was a simulation, more real sprint data would be needed to establish a reliable long-term team velocity.
